

Angular Task-1

Create an angular application having a responsive dashboard with the following requirements

1. A side navigation bar with toggle effect
2. Create buy now button at navbar to Open the dialog box with form
3. Form should contain upload image, product name and price and add product button
4. Form should have validations such as image size 100kb, validations required for fields
5. Create a responsive card grid on dashboard which will show data of new product added (You can use Bootstrap or Angular Material Card)
6. On adding new product, dynamically new card must be added to dashboard
7. Add quantity button at bottom of the card to increase/decrease the quantity of product
8. On increase/decrease of quantity the amount should be manipulated
9. Create a table below the card grid to showing the product details
10. On clicking add to bag button, bind the product data to the new record added to the table

Important.

1. You can design the template the way you want
2. No need to create left side navigation bar
3. You can discuss the issues with your group
4. Don't share/send your code to others
5. Once done upload on your github and share link
6. Also share the video where you show the working functionality in the browser
